

ELIOT WALTER

Full-Stack Python Developer — Django, FastAPI, TypeScript. I build and operate business applications in production.

(+33) 6 32 08 06 55 | eliot.walter12@gmail.com | eliotwalter.dev | github.com/zafopyss

PROFILE

Software engineering graduate (IMT Atlantique) with a business degree from Grenoble School of Management. 1.5 years on a Django application used by more than 10,000 people, from domain modelling through to running it in production. I work across the back end, the front end and the infrastructure, and I enjoy the problems where the architecture has to be settled before the code gets written.

TECHNICAL SKILLS

Back end : Python, Django, FastAPI, Celery, PostgreSQL, MySQL, Redis, REST API design

Front end : TypeScript, JavaScript, React, Next.js, Tailwind CSS

Infrastructure & tooling : Docker, Kubernetes (k3s), CI/CD (GitHub Actions, Azure DevOps), NGINX, Traefik, Keycloak, Loki/Grafana, Git

Practices : Automated testing, code review, containerisation, release and run, technical documentation, AI-assisted development

PROFESSIONAL EXPERIENCE

Full-Stack Python Developer — Mantu (permanent contract)

Strasbourg · since May 2025

Consulting group in business process and digital transformation — naval sector assignment

- Django work-permit management application, **more than 10,000 users**: domain modelling, Keycloak SSO authentication, MinIO object storage, release to production and run support.
- Led V2 end to end, from scoping with the PMs/POs through to delivery. Rebuilt the template system so a new permit type can be added without touching business code — **time to add one cut from two weeks to three days**.
- Overhauled the development environment and CI/CD pipeline: pip to uv migration, containerised development with mounted volumes, NGINX in front of the application, blocking test and quality gates — **40% faster deployments**.
- Mentored 2 junior developers: code reviews, pair programming, documentation of the project's unwritten rules, ran a weekly team meeting.

Junior Software Engineer — GEM Store (internship)

Grenoble · Oct. 2023 – Mar. 2024

Student association, 50 people

- Internal scheduling tool in Python: gathered the rules from the users, modelled them, put the tool into service — **60% less time spent on scheduling**.

PROJECTS

Job application tracker — personal project

FastAPI, Next.js, Celery/Redis, PostgreSQL, Docker, k3s

- One-click job capture through a Chrome extension, status kanban with drag & drop, full-text search and bulk actions.
- Automatic status updates driven by the mailbox: a Celery worker parses incoming mail, classifies replies, matches them to the right application and moves the card, with idempotent processing.
- TypeScript front end: kanban, drag & drop, KPI dashboard, interview calendar synced with Google Calendar / ICS.
- GitHub pipeline to a self-hosted k3s cluster: lint, pytest, image build and automatic deployment to staging.

Kubernetes homelab & automation

k3s, Docker, Traefik, Loki/Grafana, Tailscale

- Self-hosted k3s cluster for my own projects: Traefik reverse proxy, remote access over VPN, centralised logging (Grafana), scheduled backups via CronJob.

EDUCATION

Engineering degree in software — IMT Atlantique

Brest · 2023 – 2025

Software engineering, specialisation in distributed software and systems

Programme Grande École — Grenoble School of Management

Grenoble · 2022 – 2025

Project management, management, data analysis — joint engineering / management degree

ADDITIONAL INFORMATION

Languages : French native · English professional (C1) · Spanish intermediate (B2)

Interests : Climbing (bouldering and lead), running
